

DEEP-DEferiprone Evaluation in Paediatrics

How does the new syrup work?

Let's find out together!

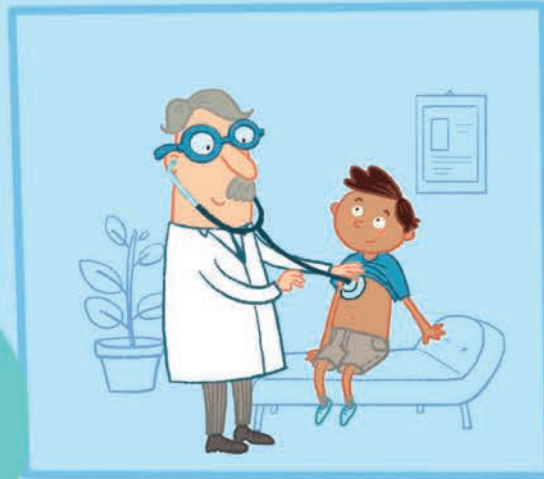

Jack and Sarah have got anemia.

This year they want to find out whether Doctor Ironless's new syrup works as well as the tablets do.

Once a week they go to the hospital.

Nora the nurse takes a sample of their blood.

Once a month,  
they have an appointment  
with Doctor Ironless.

At the end of the year, the doctor will find out whether he can give his new syrup to other children.

At home,  
Sarah takes  
the syrup  
three times a day.

Jack takes  
one tablet every  
day, dissolved  
in water.

Do you want to be like Jack and Sarah?

## DEEP - 2

EudraCT number 2012-000353-31

Multi-centre, randomised, open label, non-inferiority active-controlled trial to evaluate the efficacy and safety of deferiprone compared to deferasirox in paediatric patients from 1 month to less than 18 years of age affected by transfusion-dependent haemoglobinopathies.

Funded by the European Commission under the Seventh Framework Programme for Research and Technological Development (FP7 Project - SP1 - Cooperation HEALTH-F4-2010-261483)

Version 2.0 Release date 30/09/2012
