Developmental Pharmacology
Short course

This self-learning course will present the key aspects of developmental pharmacology, covering the impact of growth and maturation on drug disposition, effects on dosage selection and evaluation in the different paediatric age groups.

For more information about this course, click here.

**This course is open for enrolment now!**

**Target Audience:**
All professionals involved in paediatrics and paediatric drug development including but not limited to investigators, clinicians, nurses, regulators and research technicians.

**Learning objective:**
To understand how and why paediatric clinical trials differ from adult clinical trials in many pharmacological aspects
To gain knowledge of how to design and deliver trials adapted to children
To explore how to generate data and validate drugs adapted to the different paediatric age groups

**Time commitment:**
6 hours (14x 20-30 min online modules) in total but course can be completed at your own pace, in your own time.
