Practical tips for setting up gene therapy trials – an ‘Institutional Readiness’ framework short course

This course provides an overview of some of the key features of gene therapy clinical trials and how the set-up of these trials can differ from other clinical trials, based on experience from the neuromuscular and metabolic fields, as well as providing an industry perspective.

Whilst your site may not be delivering gene therapy trials at present, it is important to adequately plan and prepare for them. This course provides you with a framework for conducting an institutional readiness evaluation at your own site to help you understand if any additional provisions are required, and how you might best prepare to deliver these advanced therapy clinical trials.

The duration of this course is approx. 120 minutes but can be completed at your own pace.

For more information about this course, click here.

This course is open for enrolment now!

Target Audience:
Members of staff involved in setting up and delivering clinical trials at sites, including but not limited to, Principal Investigators, Clinical Trial Coordinators and Research Nurses.

Learning objective:
Participants will be able to understand key elements that must be addressed when setting up a gene therapy trial.

To enrol on this course, contact your National Hub training and education representative. For general enrolment enquires, contact: enrolment-e4c@opbg.net
